

# Component of nursing management

COMPONENTS  
OF  
NURSING PRACTICE FOR  
REGISTERED NURSE

A-The responsibilities  
which any registered nurse  
can safely accept are  
determined by the  
variables in each nursing  
practice

The variable are:

1- the nurses own qualifications including :

\* basic educational preparation.

\* knowledge and skills .

2- complexity and frequency of nursing care.

3- proximity of clients to personnel

4- qualifications and number of staff.

5- accessible resources.

6- established policies ,procedures, practices, channel of communication.

B- Assessment is an ongoing process  
in this point we need collection and  
interpretation of data

Collection of data •  
include:

- \* obtaining data from relevant •  
sources regarding the biophysical,  
psychological, social and cultural  
factor of the clients
- \* verifying data collected •

C- Planning nursing care activities • includes identifying the clients needs and selecting or modifying nursing interventions related to the finding of nursing assessment.

D- Implementation of nursing activities is the initiating and delivering of nursing care according to an established plan.

E- Evaluation consists of •  
determination the extent to which •  
desired outcomes of nursing care are •  
met and planning for subsequent care •

The components of evaluation •  
include: •

1- collecting evaluative data •  
from relevant source . •

Intervention. •

2- analyzing the effectiveness •  
of nursing •

3- modifying the plan of care •

F- Reporting and recording by the registered nurse.

H- Teaching and counseling clients is the responsibility of the registered nurse.

- Increase clients knowledge

- Assisting clients to reach an optimum level of health functioning and participation in self care,

J- Administered nursing services •

k- Accepting responsibility for self •  
for individual nursing action  
competence and behavior .

thanks.
