# **IMPORTANCE OF RESEARCH IN NURSING**

- 1. Research is an important tool for the continual development of a relevant body of knowledge in nursing.**
- 2. Research generates information from nursing investigations which help define the unique role of nursing as a profession.**
- 3. Professional accountability of nurses to their clients is demonstrated when nurses incorporate research evidence into their clinical decisions.**

- 4. Research facilitates evaluation of the efficacy of nurses practice which may articulate their role in the delivery of health services.**
  - 5. With research, costly trial-and-error and even unsafe interventions are avoided.**
  - 6. Research may allow nurses to make more informed decisions as each phase of the nursing process is clarified through research.**
  - 7. Research also enables nurses to understand a particular nursing situation about which little is known.**
